

Ezenia EZ-PM

project management

1. the process of planning, organizing, staffing, directing, and controlling the production of a system.
2. the act or manner of managing; handling, direction, or control.

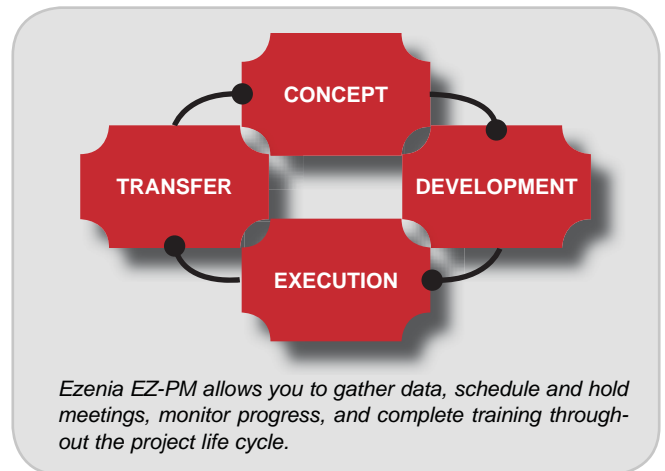

EZ-PM is designed around the concept of bringing together, in a fully functional virtual environment, a geographically dispersed organization where complex concepts, ideas, and documents can be exchanged.

Since EZ-PM is organized into virtual buildings, floors, and rooms, it is a perfect environment for Project Management. Buildings can be organized by division. Floors can be organized by the disciplines within each division, and the rooms by projects or by a specific aspect of a project. Side-bar rooms exist for off-line discussions.

Within each room are the tools a Project Manager requires: a Filing Cabinet, a Whiteboard, Audio, and Text Chat.

Within the Filing Cabinet you can place a document generated from other applications – for example, Microsoft Project. As long as the client that opens that document has a copy of Project on their workstation, all participants can view the document without having the software on their own workstations. This cost-effective feature is called Shared View.

type of image file required for the meeting. You can also use it to record ideas contributed by all participants.

Demo centers are organized in Nashua, NH; Sterling, VA, and Colorado Springs, CO. Call 800-966-2301 to arrange a demo or visit one of our demo sites.

Shared View allows a user to share with all meeting participants any image on their desktop in a user-defined window. This feature can also be used to share, for example, a PowerPoint presentation, a photograph, or an Excel spreadsheet. Whatever is on your desktop - you can share it.

The Whiteboard allows a user to import photos, sketches, maps, or any

The Audio capability is extensive. Theoretically, an unlimited number of people can simultaneously talk and listen to each other within a meeting.

Text Chats among participants are persistent. Thus an audit trail exists of how decisions were made. The ideas gleaned from decisions in one project can be reviewed after the fact and incorporated into future projects.

Another valuable application within EZ-PM is the Conference Center. This application is a virtual auditorium which allows a presenter to communicate to the audience. Members of the audience, in turn, can raise their hand and ask questions. They can also be asked to vote. At the end of one presentation, a speaker can pass the token to the next presenter.

EZ-PM is built on a concurrent licensing model so that you pay only for as many licenses as the number of simultaneous users.

Since EZ-PM was developed for both the Warfighter and the Intelligence Communities, the very highest security levels are incorporated. We offer you flexibility in hosting our EZ-PM software: you can host the services at your organization under your IP control, or you can have Ezenia arrange hosting services for you.
